NOTE: These filings increased steadily from 1990 through 2000, due to a rapid growth in advanced technology and an increase in the number of companies and individuals who view their intellectual property as assets to be protected. Filings decreased between 2000 and 2002, primarily because of a significant decline in trademark filings. The significant growth in overall filings in 2004 resulted primarily from a 23 percent increase in copyright filings. Much of the increase occurred after a judge ruled that a case originally filed in the Eastern District of Pennsylvania against more than 200 defendants must be refiled as individual cases against each defendant. Filings continued to increase in 2005 (up 27 percent overall), primarily due to a 93 percent increase in copyright filings that was likely due to music companies filing infringement cases against individuals for downloading copyrighted recordings.
